PSC Shank tools

Polygon taper shank

PSC Shank tools

JIS B 6066-1

ISO26623-1 Polygonal taper interface with flange contact surface

1 High rigidity

Polygon taper design and dual contact between the taper and the flange face for high rigidity

2 High precision

Locational accuracy within $\pm 2\mu\text{m}$

Distributes cutting forces evenly between 3 faces for enhanced rigidity and centering accuracy

Applicable Pressure : ~7MPa

When using inserts whose corner-R(RE) is greater than 1.2 mm, additional modifications to the toolholder or the shim are necessary in order to prevent workpiece and shim from interfering each other.

When using the inserts with SX chipbreaker, prepare a shim (-C type) separately.

Recommended tightening torque : 3.9 N·m

● : Standard item

Applicable Pressure : ~7MPa

Recommended tightening torque is 1.2N-m for VB 1103 type and 3.5N-m for VB(C) 1604 type.

When using inserts whose corner-R(RE) is greater than 0.8 mm, additional modifications to the toolholder are necessary in order to prevent workpiece and shim from interfering each other. (-11A, -11S)

When using inserts whose corner-R(RE) is greater than 1.2 mm, additional modifications to the toolholder or the shim are necessary in order to prevent workpiece and shim from interfering each other. (-16A, -16S)

When using inserts whose corner-R(RE) is 0.2 or 0.4mm, shim (SVN-32S*) is recommended (sold separately). (-16A, -16S)

Tools for Turning Mill

HSK-T

- The turning mill is a machine that combines turning and milling functions. Now an interface (between workpiece and toolholder - equivalent to the arbor for milling) is available for the turning mill that fulfils the ICTM standard.
- ICTM standard was developed by 16 companies in Japan, as the interface between turning mill machines. It is based on the two-face restraint type standard "ISO 12164-1:2001 HSK Standard Shank"
- This standard became an International Standard as ISO Standard "ISO12164-3:2008" in 2008. Description is indicated as HSK-T○○.

1 The interface is compatible with HSK-A type for milling tools

2 Machining precision

Machining precision for turning has improved by minimizing the gap between the drive key slot on toolholder side and the drive key on toolpost side.

Comparison of the gap of a key and key slot

N

Tools for turning mill

Quick change system

Quick change system of petal-shaped adapter

KQC series

Features

1. The way to assemble holder is turn the clamping bolt 1 round.
Tool exchange time is less than 1 minute.
2. Junction of adapter and attachment touch both taper part and face part.
And repeatability is less than 2 μ m.
3. Applicable to various tools.
 - Boring tool (Rough & Fine)
 - Face milling (Min. $\phi 63$, Max. $\phi 160$ is possible)
 - Centering tool
 - External turning
 - Combination tool
 - Applicable to tools with coolant hole

Clamping system

Adapter side

Attachment side

How to use clamping system

1. Combine petal-shaped part of adapter side with that of attachment side and insert the attachment.
2. Turn the attachment 45 degrees until stop (Clockwise direction).
3. Turn the clamp bolt attached to adapter side 1 round and tighten by Hexagon wrench.

N

Tools for turning mill

Back machining tool for Star Micronics Co., Ltd.'s machines

Sub-spindle holders

Highly rigid and supports internal coolant

Holders with a center height adjustment mechanism are available

1 Lineup: Holders for 4- and 8-spindle tool post styles

For 4-spindle tool post

4A-HA type

For High-precision
machining
Center height
adjustment

4A type

For 8-spindle tool post

8A type

2 Features

Feature 1

*Only the 4A-HA type for 4-spindle tool post supports the center height adjustment mechanism.

Adjustable sleeve enables easy adjustment
of the center height.
Provides superior adjustment accuracy

Feature 2

Supports internal coolant

Feature 3

For large shank diameter tools
High rigidity enhances chattering resistance and provides stable machining

N

Tools for turning mill

Easy and accurate center height adjustment

Adjustable sleeve makes it easy to adjust the center height
Easy to operate with excellent adjustment accuracy

Scale of adjustable sleeve

Adjust the scale of the adjustable sleeve to the reference position of the body
(Center height adjustment range : $\pm 0.2\text{mm}$)
Please check the machining diameter after adjusting the center height.

Screw for temporarily fixing adjustable sleeve

- Temporarily fix after adjusting center height
- Remove before machining

Center height adjustment per scale

(Internal evaluation)

Supports internal coolant

Accelerates chip evacuation and supports extended tool life
Special sealing discs provide more stable coolant supply

Coolant piping part (Commercial product: Rc1/8)

Use the supplied plug (GP-1)
if internal coolant is not used.

Sealing disc for sub-spindle holder (sold separately)

For coolant leakage
Using with internal coolant

High rigidity enhances chatter resistance

Increased rigidity for tools with large shank diameter
Suppresses chattering and provides stable machining under a wide range of cutting conditions

Cutting condition range for stable machining (No chattering)

Cutting conditions: $V_c = 60 \sim 130 \text{ m/min}$, $f = 0.03 \sim 0.10 \text{ mm/rev}$, $a_p = 2.0 \text{ mm}$,
Wet, SUS304 SF22H-SH20-4A-HA S20K-SDUCL11 DCGT11T302MFP-SK

Chattering resistance comparison (Internal evaluation)

Cutting conditions: $V_c = 100 \text{ m/min}$, $f = 0.05 \text{ mm/rev}$, $a_p = 2.0 \text{ mm}$
Wet, SUS304

The sub-spindle holders had no chattering and good machining sound in a wide range of cutting conditions.
Work surface after machining was also good.

(4-spindle tool post) SP-20, SR-20JⅡ(A), SB-16Ⅲ, SB-12/16/20Rseries, SR-32JⅢ(A)
(8-spindle tool post) SV-20R, SW-20 / 12RⅡ, SD-26(S / C / E / G), SR-38(B) / 20RⅣ(A / B), SR-32JⅢ(B)/20JⅡ(B), SL-10

Precautions 1. Be careful not to interfere with nearby tools. 2. Depending on the shape of the workpiece, special chucks may be required. 3. You may need to change the limits (soft limits) on the machine. 4. A short wrench is required for close proximity. 5. When the sub-spindle holders for 8-spindle tool post are mounted up and down on the tool post, the internal coolant cannot be used at the lower part. 6. When the sub-spindle holders for 4-spindle tool post is attached to the upper part of 8-spindle tool post, other tools cannot be attached to the lower part.
